Electronic Keypad Lock
Model 2310

The new 2310 Electronic Keypad Lock is a step above the competition in terms of simplicity, reliability and cost effectiveness. The 2310 offers the flexibility of being capable of either permanent or shared use applications. In addition, the lock can be either surface mounted or recessed mounted, for a lower profile and sleeker look on wood, phenolic or plastic lockers.

Simplicity: Thanks to the simple and intuitive shared use operation, user adoption is no problem. Users are able to quickly and confidently secure their personal items while using the facility. Each new user simply enters in a 4-digit combination, each time they choose to secure and then access their belongings. Supervisors are able to access locks and reset codes easily with control codes and override key.

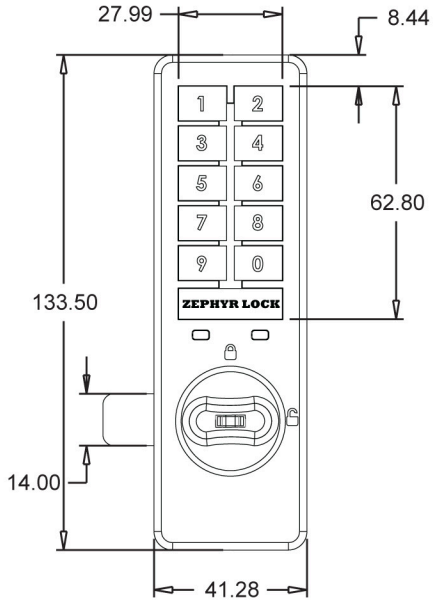

Reliability: The Zephyr Lock 2310 duty cycle and battery life far exceeds competitive options due to the manual cam lock option, which makes the 2310 a reliable and near maintenance-free option for high-traffic, multi-use environments.

Cost Effectiveness: Consumers can easily justify the investment to upgrade their facility to the 2310 with greatly reduced maintenance as well as improved user service and experience while using the facility.

SPECIFICATIONS

- 10-digit keypad with input button
- Manual turn knob with cam lever assembly
- Control key override
- Powered by two AA batteries
- Rubberized knob for better grip
- Recessed or surface mounting
- 4-digit user code and 6-digit code control code

FUNCTIONS

Shared Use: Users choose an available locker and enter a self-selected 4-digit code. To open, users re-enter 4-digit code and unlock locker. Code is erased.

Permanent Use: Users choose an available locker and enter a self-selected 4-digit code. The lock will retain the code.

Control Code: A 6-digit control code allows supervisors to unlock and clear codes if necessary.

Control Key: Allows supervisors to open all locks manually in case of lock battery failure.
